

OUTER EDEN PLANS >>>

Whilst we have many standard products our own manufacturing in the Far East can produce items to specific dimensions and indeed complete projects to a design specification brief. We are finding this flexibility to be a huge benefit to both ourselves and the client in supplying exactly what is required. We are able to produce detailed CAD drawings and 3D imagery from design briefs which are a great aid in ascertaining the suitability of a proposed scheme. The below is a good example of a project where we visited in Switzerland, took measurements and photographs, created some 3D mock ups and fitted out the scheme within the specified time scale. It enabled a quick decision to be made with confidence and formed the basis of the brief to the factory to produce both the standard and bespoke pieces required.

OUTER EDEN CUSTOM MADE >>>

Our team can assist in product development of your idea and interpret sketches into CAD drawings, 3D mock up and samples and hopefully to the finished product. Extensive consultations between design and production and monitored by quality control will ensure your visualisation will become reality. Below are examples of design process from sketches to final product in situ .
